

Assignment 3

Write a program which accepts string values in it ,use switch statement to match their results(continue & break statements are optional to use)

```
1 package assignment3;
2 import java.util.Scanner;
3 public class Switch {
4
5     public static void main(String[] args) {
6         // TODO Auto-generated method stub
7         Scanner sc = new Scanner(System.in);
8         System.out.print("Enter the string : ");
9         String S = sc.nextLine();
10
11         switch (S){
12             case "Debasish":
13                 System.out.println("String matched");
14                 break;
15             case "Satya":
16                 System.out.println("String matched");
17                 break;
18             case "Pomptel":
19                 System.out.println("String matched");
20                 break;
21             case "Arpan":
22                 System.out.println("String matched");
23                 break;
24             default:
25                 System.out.println("String does not matched");
26
27         }
28     }
29 }
30
31
```

Console Output:

```
<terminated> Switch [Java Application] C:\Program Files\Java\j
Enter the string : Satya
String matched
```

REGARDS

SATYA PRAKASH DAS
