Assignment 4

Create a MongoDB framework which uses indexing & MongoDB Functionalities for created documents.

Creating index:

Indexing is used for faster data retrival

db.dinesh.createIndex({"name":1});

```
{

    "numIndexesBefore" : 1,

    "numIndexesAfter" : 2,

    "createdCollectionAutomatically" : false,

    "ok" : 1

}
```

Output:

db.dinesh.getIndexes();

```
[

    {

        "v" : 2,

        "key" : {

            "_id" : 1

        },

        "name" : "_id_"

    },
```

```json
    {
        "v" : 2,
        "key" : {
            "name" : 1
        },
        "name" : "name_1"
    }
]
```
